SunDrop Resort at Canita Reserve

Discover The Panama City and Chepo District

AgroTourism at SunDrop Resort at Canita Reserve primarily centers on regenerative agriculture, farm-to-table experiences, and educational tours about sustainability, with a major focus on AgroForestery operations that are found at the Resort and sustainable agricultural strategies on surrounding farms and ranches in the area.

Experience Authentic Panama Living

Activities at Lake Bayano center on adventure and eco-tourism, featuring boat trips, exploring extensive limestone caves, and kayaking through canyons

Mamoni River centers on thrilling whitewater rafting and kayaking, located just one-half hour from Canita and operating year-round the river offers Class III-IV rapids, traversing scenic rainforests and the Mamoni Preserve .

Scenic drive and hike: Drive through nearby tropical rainforests and take a hike to the River. Nearby Panama City is Three Cities in One Its buildings portray it as a modern city, but it is also a historic city. In fact, it holds two other cities, both declared World Heritage Sites by UNESCO. The oldest one is Panama Viejo, it is an archaeological site that preserves the ruins of the first city, founded in 1519 and destroyed by pirates. The other one is Casco Antiguo, a walled colonial city full of color, history and flavor. Walk around its streets, you'll find a great offer of museums, hotels and the best nightlife, with rooftops and restaurants.

Explore within Panama: Other diverse areas within Panama, include areas such as the coffee-producing highlands around Boquete, the beaches of the Pacific coast, or the islands of Bocas del Toro or San Blas.

Tourism in the San Blas Islands, focuses on eco-tourism and cultural immersion within the autonomous Guna Yala territory, featuring over (365) pristine, sparsely developed islands. Visitors typically enjoy snorkeling, island hopping, sailing, and rustic, eco-lodge beach huts, often with limited electricity and no large resorts.

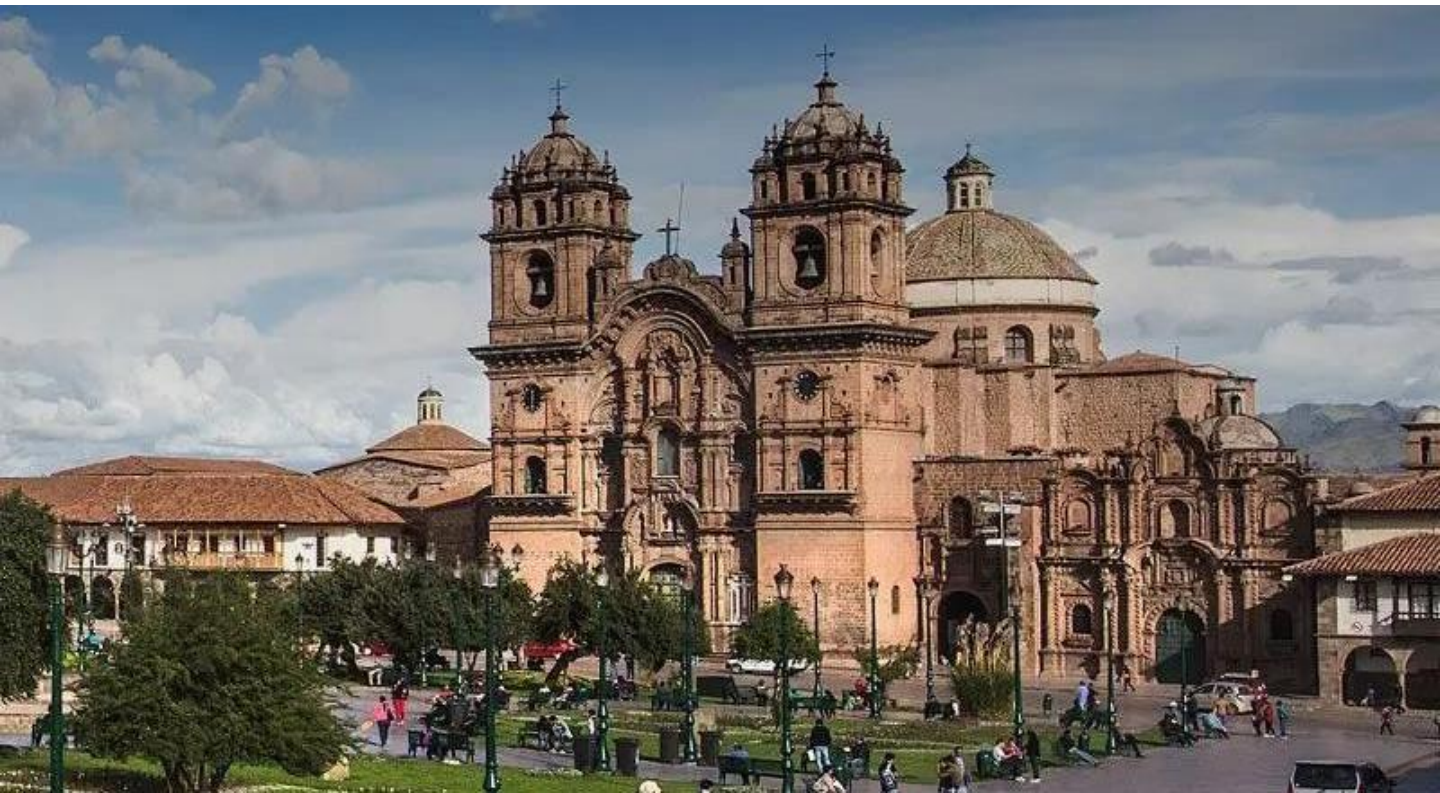
A fishing marina and sport fishing operation, very close to Canita, located at the port of Coquira, offers access to the Bayano River mangroves, estuary, and the Bay of Panama for species like tarpon and snook.

Chepo and Canita serve as a gateway to the wilder side of Panama, offering rugged, off-the-beaten-path hiking and mountain biking experiences that focus on tropical rainforests, rivers and indigenous culture.

Due to its distance from Panama City and rural setting, the areas surrounding Canita particularly near the Cocobolo Nature Reserve, offer darker skies suitable for amateur stargazing and astronomy.

The Cocobolo Nature Reserve near Canita, , primarily offers eco-tourism experiences rather than scheduled urban events. It is a dedicated nature reserve known for its extensive hiking trails, vibrant biodiversity—including over (300) bird species—and rich primary forests. It acts as a serene, off-the-beaten-path destination for birdwatching and nature immersion

The Bayano River (often called the Chepo River) is a significant Pacific-slope waterway, renowned for its adventurous cave systems, and historical significance. it offers eco-tourism, including canyoning, boat tours, and tarpon fishing.



The EcoVillage Project is a comprehensive and sustainable community development. Here's a breakdown of the components;:

Campus Building (The BLOC)

1. Senior Care Facility: With aides for elderly residents.
2. Child Care Center: Language-immersive preschool and teachers.
3. Business Center: Executive assistants available for residents and businesses.
4. Amenities:
   Billiards room
   Theater rooms
   Commercial kitchen and dining room
   Social Club (bar, restaurant, table/card games)
   Game room
   Storage spaces
   Small market
   Coffee shop
   Second restaurant

Residential Components

1. EcoHomes: (55) homes spread across (20) acres, with an overall density of 1/3 acre per dwelling.
2. Rental Apartments: (60) units available for Airbnb rentals, with potential for owner programs.
3. Workforce Housing: (20) dorm rooms accommodating up to (40) onsite staff.

The EcoResort Resort Community Services offer a comprehensive and luxurious experience, combining sustainable living with high-end amenities. Key features include:

Hospitality and Services

1. Family-Style Meals: (21) meals per week delivered to each EcoHome, prepared by on-site chefs and kitchen staff.
2. Personalized Assistance Programs: (15) hours per week of dedicated support for each EcoHome, customizable to:
   Senior care
   Childcare
   Executive Assistant (digital) services
   Spanish/English home tutoring
   Forest hiking/nature guide adventures

Community Features

1. Community Garden: Cooperative garden boxes for residents.
2. Sports Courts: Sports courts for recreational activities.
3. Lakes: Three natural spring-fed lakes with swimming and lap courses, as well as fishing.
4. CoOp Livestock Production: Facilities for chicken, turkey, rabbit, pig and goat production with feeders and free-range pens.

Wellness and Fitness

1. Holistic Spa: Offering various spa services.
2. Fitness Center: With yoga, spin classes, and group fitness classes.

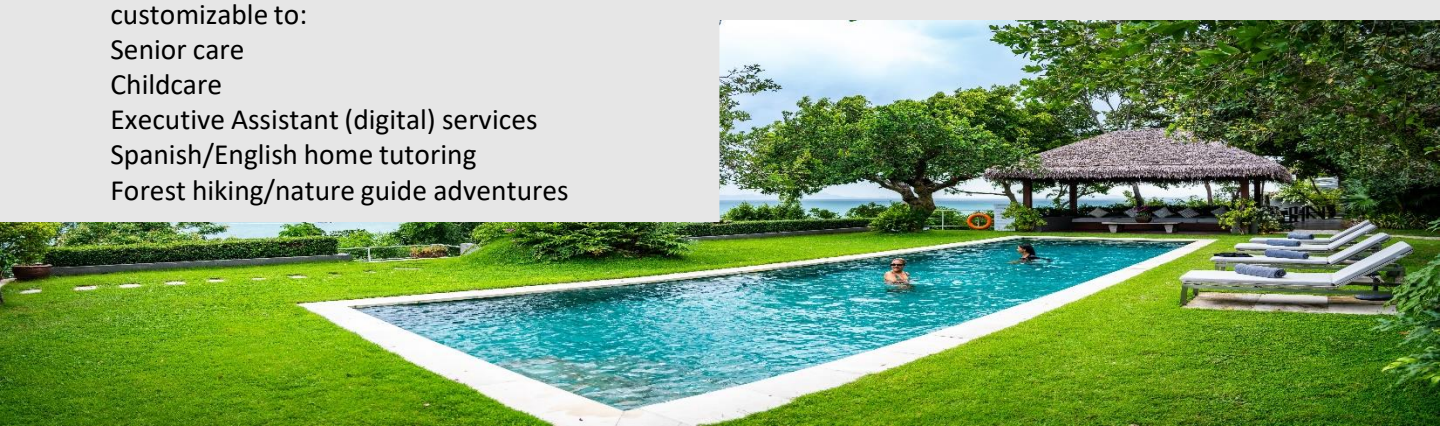
Community Engagement

1. Participation Programs: Opportunities for residents to participate in community activity.
2. Volunteering Programs: Residents can volunteer and give back to the community.
3. Tutoring Programs: Available for residents, particularly children.

The EcoVillage Project will prioritize sustainability, community engagement, and holistic living. It's a project that will be a unique and fulfilling lifestyle for its residents.

Sustainable Practices

1. Forest Restoration: Efforts to preserve and restore the natural forest ecosystem.
2. Farm-to-Fork CoOp Farming: On-site farming and food production, promoting sustainable agriculture and reducing carbon footprint.
3. Agroforestry opration



Security and Safety:

1. Armed Private Security Staff: 24/7/365 security presence on the property.
2. Security Drivers: Additional safety measures for residents.

Investment Benefits

1. Pathway to Panama Citizenship: Ownership investment includes a pathway to citizenship within (5) years.
2. Legal Services: Included as part of the investment package.

The EcoResort Resort Community Services prioritize sustainability, luxury, and personalized support, offering a unique living experience.

The EcoVillage systems equipment is quite comprehensive, incorporating sustainable energy solutions, eco-friendly waste management, and innovative transportation. Let's break down some of the key components:

Sustainable Energy Solutions

1. Solar Array: Generates electricity from sunlight, reducing reliance on non-renewable energy sources.
2. Micro-Hydro Power Generation: Harnesses energy from water flow to produce electricity, providing a reliable and renewable source of power.
3. Battery Storage System: Stores excess energy generated from solar and micro-hydro power for later use, ensuring a stable energy supply.
4. LNG Storage Tank and Micro Turbine Back-up Generator: Provides a backup power source during periods of low energy generation, ensuring continuous power supply.

Waste Management Systems

1. Grey Water Recycling System: Treats and reuses grey water for irrigation, toilet flushing, or other non-potable purposes, reducing water waste and conserving resources. This system can also produce steam and hot water for domestic use, and even generate power.
2. Black Water and Organic Composting System: Converts human waste into nutrient-rich compost, reducing waste disposal and creating a valuable resource for agriculture.

Transportation

1. Electric Mountain Bikes and Charging Stations: Provides a sustainable mode of transportation for short distances, reducing reliance on fossil fuels.
2. Electric ATVs and Charging Stations: Offers a versatile and environmentally friendly option for transportation and recreation.
3. Community Electric SUVs with Drivers and Charging Station: Provides a convenient and sustainable transportation solution for residents and visitors.
4. Helicopter Taxi Pad: Allows for direct flights from Panama City Airport in Bogota, providing easy access to the EcoVillage.

Other Features

Gardening Sheds with Electric Power Equipment and Hand Tools: Supports sustainable gardening practices and provides residents with the necessary tools and equipment.

Overall, the EcoVillage systems equipment is designed to promote sustainability, reduce waste, and create a self-sufficient community. By incorporating innovative technologies and eco-friendly practices, the EcoVillage serves as a model for environmentally responsible living.

Here is a list of equipment for the EcoVillage.

Agricultural Equipment:

1. Tractors or small farm equipment: For maintaining the community garden and farm areas.
2. Irrigation systems: To efficiently water crops and gardens.
3. Greenhouse equipment: For starting seeds, propagating plants, and extending the growing season.

Animal Husbandry Equipment:

1. Chicken coops and equipment: For raising chickens and collecting eggs.
2. Rabbit hutches and feeders: For raising rabbits and other small animals.
3. Poultry processing equipment: For processing and packaging poultry products

Renewable Energy Equipment:

1. Solar panels: To generate electricity and reduce reliance on non-renewable energy sources.
2. Wind turbines: To generate electricity and supplement solar power.
3. Energy storage systems: To store excess energy generated by solar and wind power.

Water Management Equipment

1. Water filtration systems: To purify water from natural sources or wells.
2. Rainwater harvesting systems: To collect and store rainwater for irrigation and other non-potable uses.

Community and Recreational Equipment

1. Sports equipment: For the sports courts and other recreational areas.
2. Outdoor furniture: For community gathering spaces and outdoor areas.
3. Art and craft supplies: For residents to express their creativity.

Other Equipment

1. Composting equipment: To turn food waste into nutrient-rich soil.
2. Recycling equipment: To sort and process recyclable materials.
3. Maintenance equipment: For general maintenance and upkeep of the community.

The EcoResort Glamping experience is a unique blend of nature, culture, and sustainability. Here's a breakdown of what it entails:

Key Features

1. Indigenous Experience: Guests Immerse themselves in local rituals, cooking, and nature studies, promoting body, mind, and spirit rejuvenation.
2. Glamping Sites: (25) Indigenous Replicative Glamping sites available for rent on Airbnb, offering a luxurious and immersive experience.
3. Eco Reforestation: A 15-year program to plant and maintain 10,000 native trees and plants on (17) hectares of deforested land, previously used for ranching.

Benefits

1. Sustainable Tourism: Supports local ecosystems and promotes eco-friendly practices.
2. Cultural Exchange: Fosters understanding and appreciation of indigenous cultures and traditions.
3. Nature Connection: Provides opportunities for guests to reconnect with nature and themselves.

Similar Eco-Resorts

Some examples of eco-resorts that might offer similar experiences include:

1. Las Qolqas Eco Resort in Peru, featuring luxury safari-style tents and a focus on sustainability.
2. Paradu Tuscany EcoResort in Italy, offering eco-chalets and lodge tents amidst a Mediterranean pine forest.
3. Mas Salagros EcoResort in Spain, a 100% eco-friendly destination with sustainable operations and organic cuisine.
4. Talaia Plaza EcoResort in Spain, a hillside resort overlooking the Mediterranean Sea, prioritizing sustainability and local culture.

These eco-resorts prioritize sustainability, local culture, and connection with nature, providing unique experiences for guests. The EcoResort Agroforestry project is a comprehensive and sustainable initiative, combining commercial agroforestry with farm-to-fork operations. Here are some benefits and features:

AgroForestry Operation

1. Diverse Crops: Planting approximately 2,000 trees and plants, including exotic hardwoods, cocoa, lime, avocados, mango, berries, and other commercial crops.
2. Sustainable Practices: Agroforestry promotes biodiversity, soil conservation, and efficient water use.

Farm-to-Fork Operation

1. CoOp Food Production: On-site production of vegetables, fruits, and proteins, promoting local food systems and reducing carbon footprint.
2. Integrated Farming: Combining fish (trout) farming, poultry, and small animal ranching to create a diverse and resilient food system.

Benefits

1. Economic Benefits: Commercial AgroForestry and farm-to-fork operations generate income and create jobs.
2. Environmental Benefits: Sustainable practices promote biodiversity, soil conservation, and efficient water use.
3. Social Benefits: Cooperative farming and food production foster community engagement and social cohesion.

Overall, the EcoResort Agroforestry project will be a holistic initiative that combines sustainable agriculture, local food systems, and community development.
